

AI-Native CLI

Give AI its own manual. The core concept revolves around creating APIs for interactions, driving efficient,

Help Levels -1 to 3

[help-levels-1-3.png](data:uri=url;file="help-levels-1-3.png";type = /

And it is still three more lookups down

Use the attached **help-levels-4-6.png** as the main evidence. WAF policy, managed rule, and exclusion must still be inspected

Optimize Everything, Regardless of AI

Correct assessment is crucial for optimal accuracy. Let's focus on refining accuracy strategies to deliver relevant responses - ensuring precise understanding and anticipating future challenges.

Automating everything involves a foundation of high-quality model training and constant refinement, so it's vital that we prioritize quality across all parts, even seemingly small,

The Model's Journey

Understanding Syntax & Recovery Mode"} Ridiculously confusing code can fail against a command contract with different syntax rules, prompting analysis and rebuilding plan. Fix this by

1

Error Analysis

The agent faced difficult configuration - fixing complex issues requires deep understanding and recovery mode.

Understanding Data Structures Principles - A

The core concepts of data structures form the foundation for efficient programming and algorithmic problem solving.

Algorithms Overview

A brief overview of key algorithms used in computer science: sorting, searching...

Callouts & Footers - Recurring Framework

Dynamic Timeline Visualization for Key Events and Annotations

Link: https://example.xyz

Call Out Frames

A dynamic timeline to display the key events, and annotation of all series

Key Events

Each label will be displayed sequentially based on their location within the view and a short description will appear beside it.

|
|

Link: [https://example

Significant Points

Key events that define significance for understanding or highlighting key points

Details On All

Visual representation of the location and value behind a visual in all of our timeline's locations.

Quick Access

Efficient Workflow & Assistance}}

****Tool** Leverage streamlined capabilities for enhanced productivity and faster response cycles.

A comprehensive set of tools designed to empower you with greater efficiency and reduced operational requirements.

Quick Access

'Built-in Agent' - API Client: To assist with generating dynamic content. Allows a

System Integration, Automated Monitoring & Reporting. Ensure optimal functionality

'Developed tools for an extended life, and future growth to accommodate expanded AI

`The system has been extensively designed for optimized performance. It may

Quick Access

'CLI + skill' - For deployment and ongoing system maintenance.

Automated Management of Resources. Minimising manual intervention.

The framework is fully built on the current infrastructure which allows continuous,

Maintain performance and scalability over time.

Resource Group Creation

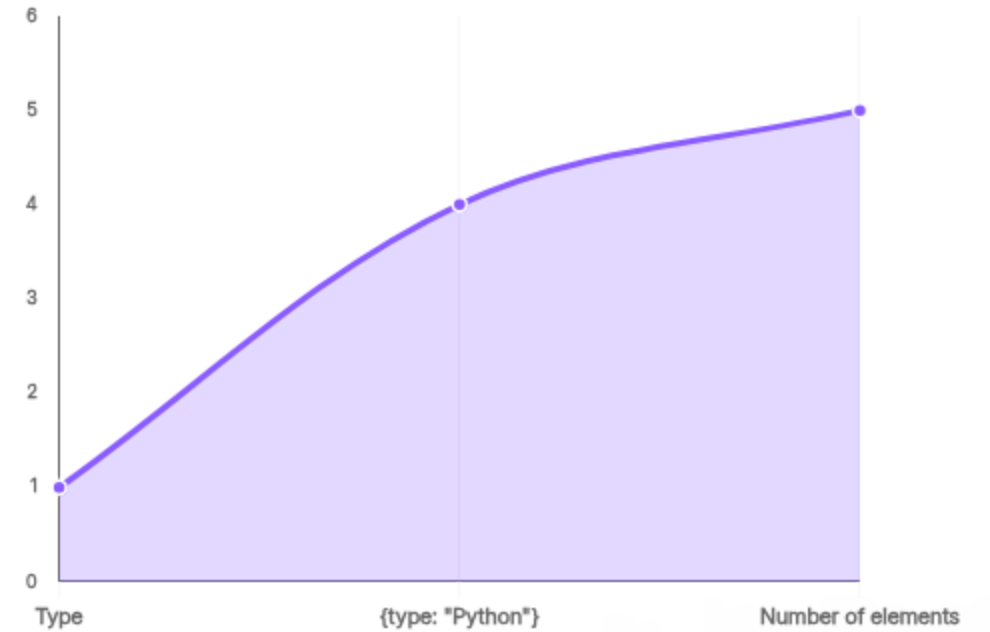

Creating a resource group using the prototype CLI is essential because it acts as a foundation for organizing your development.

Required Steps

Complete these steps following these guidelines to establish and manage resource groups easily

Set the Group Name

Name your group according to a meaningful name that reflects the business purpose.

Every product needs two front doors

every product requires two front doors for access for people and AI components

data

Data requirements for every platform user account across three stages, defined as high, medium, low

core_

This is the essential set of features and values required on this slide to fulfill the user's core experience, detailed description of which is included in slide's core.

Ship The AI Manual With The Product

Navigate to streamline efficient workflows, ensuring comprehensive protocols are addressed.
